Ashish Kharche

Senior Mobile Engineer | AI features in mobile and web apps, TypeScript and AWS

thekharche@gmail.com | linkedin.com/in/ashish-kharche | github.com/ashishkharche | ashishkharche.com | London, UK

Right to work: UK Skilled Worker visa (current). Sponsorship needed to change employer. Available immediately.

Relevant Experience

Senior Mobile Engineer | Paythru Limited

March 2024 to October 2026 | London, UK

- Contributed to Paythru's new TypeScript payments platform on AWS (CDK, ECS Fargate, RDS PostgreSQL, Lambda, SQS) in 2026, designed for 10,000 terminals.
- Used AI coding tools under strict review: checked every change against the AWS and Adyen docs, tested failure cases and personally approved every change.
- Ensured repeated or duplicate Adyen payment notifications (webhooks) were never processed twice, with tests for each failure case.
- Built EV charging features across six branded apps with about 100,000 sessions in Kotlin and Jetpack Compose, with Adyen payments in the app and on terminals.

Mobile Engineer | Paythru Limited

October 2022 to February 2024 | London, UK

- Developed Android features for Paythru's branded EV charging and payment apps in Kotlin and Jetpack Compose, released on Google Play.
- Wrote automated tests with Maestro and JUnit, plus screenshot comparison tests.

Quality Assurance Engineer | SpaceX Super Intelligence (SpaceXSI), formerly xAI

January 2026 to October 2026

- Retested more than 500 Grok iOS and web app builds before each release.
- Checked each build's changes across chat, Imagine, Build and MCP, plus payments, subscriptions and sign-in, and approved it for release.
- Reported bugs in Linear with clear steps to reproduce them, and worked with engineers on each bug until the build was ready to ship.

Developer | Maestro (maestro.dev)

March 2023 to September 2024 | mobile app testing tool

- Wrote about 10 sets of mobile tests covering four main features for Maestro Cloud and Studio.
- Created product guides and starter example projects.
- Published 14 posts on the Maestro blog (maestro.dev/blog) about testing Android and iOS apps.

Certifications

AWS Certified Solutions Architect - Associate

AWS Certified Cloud Practitioner

Skills

AI features

realtime voice over WebRTC, tool calls the app applies with Undo and Confirm, short-lived keys from the server, on-device fallback

Agents and tools

MCP, Grok Bot, Claude Code, Cursor

On-device vision

MediaPipe pose tracking, Apple Vision

Languages and cloud

TypeScript, Node.js, React, Kotlin; AWS (Lambda, API Gateway, DynamoDB, CDK)

Testing and release

Maestro, Vitest, JUnit, PostHog feature flags, TestFlight

Education

Kingston University

September 2021 to September 2022 | London

MSc Software Engineering

Government College of Engineering Aurangabad

2016 to July 2020 | Aurangabad, India

Bachelor of Engineering (BE), Computer Science

Projects

Workout Director

App Store, Own app, live since Oct 2026

Camera rep counter and voice coach for gym and home workouts.

Built with SwiftUI, MediaPipe, WebRTC, a realtime voice model, PostHog and AWS (Lambda, Secrets Manager, CDK).

The voice coach never receives video; it asks the app to make changes, such as a 90-second rest, which the user can undo.

Kalo

App Store, Own app

Calorie and macro tracker: log a meal by photo, voice or barcode.

Built with Swift, SwiftUI, a server-side proxy for meal analysis and Open Food Facts.
