Ashish Kharche

Senior Mobile Engineer | Android (Kotlin, Jetpack Compose) and iOS (Swift, SwiftUI)

thekharche@gmail.com | linkedin.com/in/ashish-kharche | github.com/ashishkharche | ashishkharche.com | London, UK

Right to work: UK Skilled Worker visa (current). Sponsorship needed to change employer. Available immediately.

Relevant Experience

Senior Mobile Engineer | Paythru Limited

March 2024 to October 2026 | London, UK

- Built EV charging features across six branded apps with about 100,000 sessions, in Kotlin and Jetpack Compose on Android and Swift and SwiftUI on iOS.
- Developed the Adyen card payment terminal app in Kotlin and Jetpack Compose, and added Adyen payments in the app and on the terminals.
- Tested it on a Castles S1U2 terminal and kept its live connection stable, reconnecting automatically if it dropped.
- Secured the terminal app: blocked screenshots, restricted its local controls, kept card details out of logs and locked it after repeated wrong PIN attempts.
- Cut release time from a few weeks to a few days by rebuilding the build and release pipeline (Bitrise), so any change could go to the app stores.

Mobile Engineer | Paythru Limited

October 2022 to February 2024 | London, UK

- Wrote automated tests with Maestro and JUnit, plus screenshot comparison tests.
- Tracked crashes with Firebase Crashlytics and used Remote Config in the live apps.

Quality Assurance Engineer | SpaceX Super Intelligence (SpaceXSI), formerly xAI

January 2026 to October 2026

- Retested more than 500 Grok iOS and web app builds before each release.
- Checked each build's changes across chat, Imagine, Build and MCP, plus payments, subscriptions and sign-in, and approved it for release.
- Reported bugs in Linear with clear steps to reproduce them, and worked with engineers on each bug until the build was ready to ship.

Developer | Maestro (maestro.dev)

March 2023 to September 2024 | mobile app testing tool

- Wrote about 10 sets of Android and iOS tests covering four main features for Maestro Cloud and Studio, run automatically on Maestro Cloud, GitHub Actions and Bitrise.
- Created product guides and starter example projects.
- Published 14 posts on the Maestro blog (maestro.dev/blog) about testing Android and iOS apps, including React Native and Expo, Flutter, and faking server responses in tests with WireMock.

Certifications

AWS Certified Solutions Architect - Associate

AWS Certified Cloud Practitioner

Skills

Android

Kotlin, Jetpack Compose, Coroutines, Flow, Hilt, MVVM, Google Play Console

iOS

Swift, SwiftUI, UIKit, Combine, Swift concurrency, SwiftData, HealthKit

Testing

JUnit, XCTest, XCUITest, Maestro, Appium, snapshot and regression testing

Payments

Adyen (in-app and Terminal API), RevenueCat

CI/CD and monitoring

Bitrise, GitHub Actions, fastlane, TestFlight, App Store Connect, Firebase

Back end

TypeScript, Node.js, REST, WebSockets, AWS (Lambda, DynamoDB, CDK)

Education

Kingston University

September 2021 to September 2022 | London

MSc Software Engineering

Government College of Engineering Aurangabad

2016 to July 2020 | Aurangabad, India

Bachelor of Engineering (BE), Computer Science

Projects

Workout Director

App Store, Own app, live since Oct 2026

Camera rep counter and voice coach for gym and home workouts.

Built with SwiftUI, MediaPipe, WebRTC, PostHog and AWS (Lambda, DynamoDB, CDK).

Kalo

App Store, Own app

Calorie and macro tracker: log a meal by photo, voice or barcode.

Built with Swift, SwiftUI, HealthKit, RevenueCat and Open Food Facts.
