Ashish Kharche

Senior Mobile Engineer | Full-stack TypeScript, React, Node.js, AWS and payments

thekharche@gmail.com | linkedin.com/in/ashish-kharche | github.com/ashishkharche | ashishkharche.com | London, UK

Right to work: UK Skilled Worker visa; requires sponsorship. Available immediately.

Relevant Experience

Senior Mobile Engineer | Paythru Limited

March 2024 to October 2026 | London, UK

- Contributed to Paythru's new payments platform in 2026, designed for 10,000 terminals: a TypeScript API with Fastify, Zod and OpenAPI, a React and Vite staff portal, and PostgreSQL with Drizzle.
- Defined its infrastructure in AWS CDK: ECS Fargate behind a private load balancer and CloudFront, RDS PostgreSQL, Lambda, API Gateway and SQS, with alarms, an uptime check and budgets.
- Integrated the Adyen Terminal API and Checkout, with an audit log that can only be added to.
- Ensured repeated or duplicate Adyen payment notifications (webhooks) were never processed twice, with tests for each failure case.
- Prevented double charges by never marking an unclear payment as failed.

Mobile Engineer | Paythru Limited

October 2022 to February 2024 | London, UK

- Built EV charging features across six branded apps with about 100,000 sessions, on Android in Kotlin and Jetpack Compose.
- Wrote automated tests with Maestro and JUnit, plus screenshot comparison tests.

Quality Assurance Engineer | SpaceX Super Intelligence (SpaceXSI), formerly xAI

January 2026 to October 2026

- Retested more than 500 Grok web and iOS builds, each before release, across chat, Imagine, Build and MCP, plus payments, subscriptions and sign-in.
- Reported bugs in Linear with clear steps to reproduce them, and worked with engineers on each bug until the build was ready to ship.

Developer | Maestro (maestro.dev)

March 2023 to September 2024 | mobile app testing tool

- Wrote about 10 sets of mobile tests covering four main features for Maestro Cloud and Studio, run automatically on GitHub Actions and Bitrise.
- Published 14 posts on the Maestro blog (maestro.dev/blog) about testing, including React Native, Flutter and faking server responses with WireMock.

Certifications

AWS Certified Solutions Architect - Associate

AWS Certified Cloud Practitioner

Skills

Front end

TypeScript, React 19, Vite, TanStack Router and Query, Next.js, Tailwind CSS

Back end

Node.js, Fastify, REST, OpenAPI, Zod, PostgreSQL, Drizzle, WebSockets

AWS

CDK, ECS Fargate, Lambda, API Gateway, RDS, SQS, CloudFront, DynamoDB

Payments

Adyen Terminal API, Checkout and webhooks

Testing and tools

Vitest, Jest, Playwright, Cypress, Maestro, Docker, GitHub Actions, Agile, Jira

Mobile

Kotlin, Jetpack Compose, Swift, SwiftUI

Education

Kingston University

September 2021 to September 2022 | London

MSc Software Engineering

Government College of Engineering Aurangabad

2016 to July 2020 | Aurangabad, India

Bachelor of Engineering (BE), Computer Science

Projects

Workout Director

App Store, Own app, live since Oct 2026

Camera rep counter and voice coach for gym and home workouts, plus its web app.

Built with TanStack Start, React 19, Tailwind CSS and a TypeScript API on AWS Lambda with DynamoDB and Better Auth, all in CDK.

Kalo

App Store, Own app

Calorie and macro tracker: log a meal by photo, voice or barcode.

Built with Swift, SwiftUI, a server-side proxy for meal analysis, Open Food Facts and RevenueCat.
